B - Average Replacement Cost for Buildings .....	3.2
C - Campus Building Condition Assessment Form .....	3.3
D - Definitions .....	3.4

## Executive Summary

This sixth report has been produced in an effort to identify and provide an update on the magnitude of deferred maintenance issues with a primary focus on “mission critical” buildings on the campuses of the State universities. Information for this report was developed following processes previously used for biennial reports beginning in 2004. These processes were first validated by an independent national consultant, the ISES Corporation based in Atlanta, GA, in 2004. The 2005 Legislature authorized a limited-scope Legislative Post-Audit study that confirmed the severity and magnitude of the deferred maintenance problem and affirmed that the age of the buildings and the lack of funding for maintenance have contributed directly to the current state of these facilities.

To ensure that the Fall 2014 audits were conducted consistently and accurately, each university used the same Facility Condition Audit form along with guidelines established in the Assessment Dictionary. This Assessment Dictionary provides a visual dictionary of various building component conditions to ensure that personnel at each university are assessing their buildings similarly and accurately. The building audits resulted in condition values for each building, which in turn were used to calculate both Renewal and Replacement Costs.

This report will follow the format of past reports as it will provide renewal costs for “mission critical” buildings, “other” state-owned buildings and a total for the two. For this 2014 report, “mission critical” buildings have been redefined as “EBF Eligible” to help convey the current Board of Regents’ guidance for use of revenues generated by the Educational Building Fund (EBF).

A complete building schedule can be found starting on page 2.2:

- “EBF Eligible” buildings are not highlighted
- “Non-EBF Eligible” buildings are highlighted in gray

**The current estimate of the deferred maintenance backlog referred to as Renewal Costs in the schedules for “EBF Eligible” (“mission critical”) buildings, utilities and infrastructure is approximately \$829 million. An annual amount of \$99 million (with no inflation factor) is estimated to be required for on-going maintenance to prevent further backlog and to adequately maintain the university campuses.**

The \$829 million estimate for Fall 2014 compares to a backlog of \$762 million in the Fall 2012 report. This increase of \$67 million, or 8.8%, is reasonable when considering the following observations:

1. At the time of the 2012 report, the economic downturn had resulted in favorable bids on construction labor and material costs. This is no longer the case and as the economy has improved, our universities have experienced a 6.6% increase (see Appendix B) in building unit costs. Additionally, utilities and infrastructure unit costs have also been increased by a conservative 2% per year (and 4% total for the 2-year period covered by this report).
2. Across all the state universities, buildings have aged and, with insufficient funding for deferred maintenance, deteriorated to lower Condition Values. As compared to 2012 Condition Values, the universities have experienced a 1.2% decrease in “excellent” ratings, a 0.5% decrease in “good” ratings, a 1.4% increase in “fair” ratings, and a 0.2% increase in “poor” ratings. Lower Condition Values add millions of dollars to the deferred maintenance backlog calculation.
3. Recent major renovations at Kansas State University have highlighted the severe extent of stone degradation in many of their buildings. This knowledge has resulted in more accurate building assessments and lower Condition Values, and has contributed in large part to Kansas State University’s \$34.4 million (15%) increase in Renewal Costs from 2012.

## **Introduction**

### **A Significant Investment**

It cannot be overemphasized that the state's investment in buildings and infrastructure on the campuses of the State universities is tremendous. The State universities and their governing Board the Kansas Board of Regents oversee this investment, but the buildings and the land that they occupy belong to the citizens of Kansas.

The holdings are sizable - 864 buildings encompassing 31.6 million square feet, sited on 26,274 acres, with a total Replacement Value of \$8.3 billion, and comprising approximately two-thirds of the State of Kansas' total building inventory.

### **Addressing Mission Critical Needs**

This report primarily focuses on the academic and academic support buildings that are "mission critical" to the teaching and research functions of the State universities. Current guidance from the Kansas Board of Regents directs the use of all revenues generated by the Educational Building Fund (EBF) to be used solely for deferred maintenance on these "mission critical" buildings and infrastructure.

Included for information purposes only are other state buildings that serve auxiliary functions, such as residence halls, student unions, and parking garages and also buildings that do not directly support the academic mission of the State universities, such as homes for university Presidents, athletic facilities, chapels, recreational facilities, etc.

The 423 "mission-critical" (EBF Eligible) buildings included in this report represent 17.2 million square feet of space, with a total Replacement Value of \$4.97 billion. Utilities and infrastructure to support these facilities add another \$430 million in Replacement Costs, for a combined total of \$5.4 billion.

### **Factors Contributing to the Problem**

Primary factors leading to the current state of deferred maintenance on the university campuses are a lack of funding, coupled with the age of the buildings (see Figure 1 below). It is important to note that 75% of the total inventory is at least 30 years old. A need for periodic maintenance or replacement is to be expected as building systems and materials reach the end of life cycles. Over the past 35 years, the universities received insufficient rehabilitation and repair funding (see Appendix A). Both the Legislature's Joint Committee on State Building Construction and the Board of Regents recognized this as a problem, and in fiscal year 1992, Educational Building Fund monies previously used for new capital projects were redirected to fund Rehabilitation and Repair (R&R) projects.

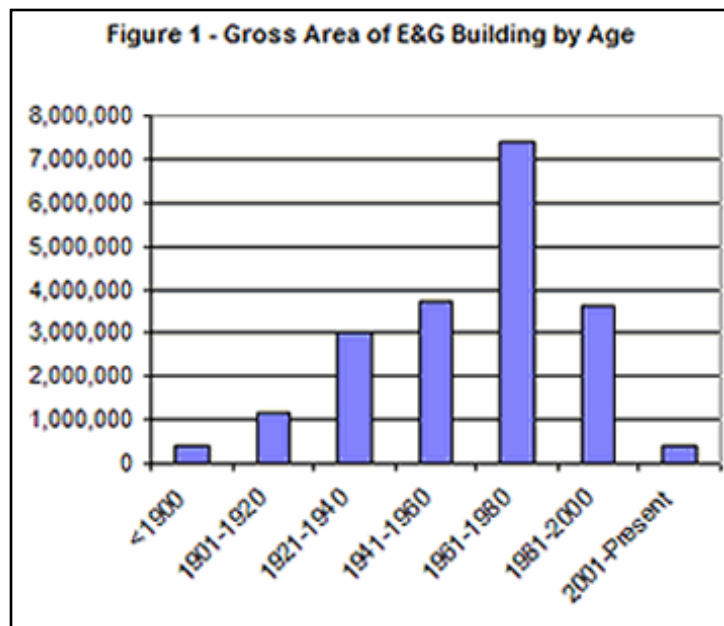

Acknowledging variances for age and type of facilities, the Building Research Board of the National Research Council in their study "*Committing to the Cost of Ownership: Maintenance and Repair of Public Buildings*" concludes that an appropriate budget allocation for routine maintenance and capital renewal is in the range of 2 to 4 percent of the current replacement value (CRV), excluding major infrastructure. The Association of Physical Plant Administrators (APPA) and experts in the field of deferred maintenance generally accept this range.

Assuming the low end of the range, 2% multiplied by the CRV of \$4.97 billion equals approximately \$99 million per year that should be spent to properly maintain the mission-critical facilities on the university campuses.

**This compares to the \$80.7 million currently committed - \$35 million allocated for FY 2014 from the EBF, and the estimated \$45.7 million budgeted in operating budgets.**

The deferred maintenance backlog is a national problem, affecting both private and state institutions of higher education. Estimates of the nationwide problem vary from \$26 billion (acknowledged to be conservative) to over \$50 billion.

The 1960s through the 1980s were periods of huge growth for all of higher education. Like many institutions across the nation, nearly 40% of the Kansas Board of Regents' university space was built within that time frame. The major expansion was initiated by unprecedented enrollment due to the "Baby Boom" generation.

Now, some 30-50 years later, these buildings require simultaneous overhaul of their major subsystems. Heating, ventilation, electrical, and plumbing systems that have not been replaced already are either worn out or about to wear out - and it isn't because they haven't been maintained. It is simply because the systems have reached the end of their useful life. The average life cycle of the components that make up buildings is 23 years\*.

### **First Steps Taken to Address the Problem**

The Board and its institutions are appreciative of steps taken during the 2007 legislative session, enacting legislation creating the

Postsecondary Educational Institution Long-Term Infrastructure Maintenance Program, as well as other important financing mechanisms to be implemented over a five year period. For the six State universities, the five-year maintenance plan included \$90 million in direct state funding, approximately \$47 million in retained interest earnings from universities' funds, and up to \$118 million in private contributions generated by state-funded tax credits. If these separate funding mechanisms, totaling \$255 million, had been fully realized, this legislation would have addressed approximately 38% of the maintenance backlog (documented at \$663 million in 2006) existing on State university campuses.

The economic recession significantly impacted the five-year maintenance program. Ultimately, a total of \$87.4 million was made available. This included \$63.7 million in state funds for the first three years. Interest rates also failed to produce the earnings originally anticipated. Tuition interest earnings amounted to \$21.4 million over the 5-year period. Finally, eligible donations of the state-funded tax credits totaled only \$2.3 million. Fortunately, Federal stimulus ARRA funding totaling \$45.8 million was received and beneficial in completing many of the planned projects.

This report presents data at a specific point in time. The \$829 million Renewal Cost figure presented is the amount needed to bring the buildings, utilities, and infrastructure to a current, acceptable level. **Any funding plan to address corrective measures must recognize two factors: 1) the need for deferred maintenance backlog reduction and, 2) sufficient capital funding to perform on-going maintenance. Without this two-pronged approach, the deferred maintenance backlog will continue to grow.** Properly attending to deferred maintenance and capital renewal will require funding from a dependable, on-going revenue source over an extended time period to reach manageable levels.

\* "Successful Strategies for Reducing University Deferred Maintenance" Matthew C. Adams, P.E., President, M.C. Adams & Associates.

## History and Process to Develop this Report

In the fall of 2002, the Kansas Board of Regents performed a study resulting in the document *Report on State University Deferred Maintenance and Capital Renewal*. This study and the resulting report were an effort to quantify the physical condition of the facilities on State university campuses. The thoroughness and accuracy of this initial 2002 report was limited by the three-week time period allowed for its preparation. For example, buildings were given an overall facilities condition audit (FCA) score, rather than evaluating individual system components to arrive at a more accurate FCA score; costs of utilities and infrastructure were derived from data obtained from a 1987 report, with costs indexed forward to 2002; and time constraints also prevented a careful review and update of campus inventory information.

Significant improvements were made to the subsequent report prepared in 2004, with the intent to provide the most accurate information available within a reasonable timeframe. To gain a better understanding of how this was accomplished, following is a brief description of the 2004 process:

1) At the March 2004 State University Council of Presidents meeting, the Presidents and Chancellor charged the University Business Officers to develop a plan for addressing deferred maintenance that would include annual spending and some revenue bond financing. Key components of the plan included:

- The Board's Director of Facilities would work with the campus architects over the summer to update the estimated cost of the deferred maintenance problem. The group would review and update the building condition values, the condition of campus utilities and infrastructure, and the current replacement costs of these items.

- Some portion of any new revenue would be dedicated to the annual allocation for Rehabilitation and Repair (R&R) projects.
- The balance of any new revenue would be used to address deferred maintenance.
- Detailed plans would be developed by each campus to address deferred maintenance, including creating listings of buildings with the greatest need in priority order. Allocations of funding requests would be made by the Board of Regents based upon these plans.

The State University Council of Presidents and the Board of Regents subsequently concurred with these recommendations and also suggested that a consultant should be retained to validate the process.

2) In an effort to bring consistency to the facilities audits and prevent unintended biases or subjectivity, the Director of Facilities for the Kansas Board of Regents performed sample audits with university architects between June 16 and July 2, 2004. Approximately 40 buildings were evaluated on seven campuses. The buildings were intentionally selected to represent a cross-section by age, technology, programmatic use, historical significance, and so forth. In most cases, physical plant personnel accompanied the university architects to provide additional history pertaining to the mechanical, plumbing, and electrical systems.

The sample audits were used as a reference or benchmark. The campuses then completed the audits for all 537 academic/ administrative buildings (commonly termed educational and general or E&G) and submitted them to the Board office on August 1, 2004.

A few parameters were established prior to the audits:

- When evaluating conditions, err on the side of conservatism; it is more credible to understate the problem than to overstate it.

- Assume conditions that will be improved by performance contract projects have been completed.
- Use the definitions on the assessment forms to evaluate the various building, utility and infrastructure components.

3) Simultaneously, the Board office worked with the universities to update replacement costs of buildings, utilities and infrastructure; building inventories; quantities of utilities and infrastructure and other data.

4) In July 2004, an RFP was sent to three well-known facilities management consultants, suggested by the Association of Physical Plant Administrators (APPA). The Council of Business Officers and the Campus Architects reviewed their credentials, and ISES Corporation, Atlanta, Georgia, was selected to provide validation to the process being undertaken.

The Executive Vice-President of ISES Corporation conducted an independent sample audit of the campus facilities the week of August 16-20, 2004.

5) Board staff reviewed assessment forms and other received data and coordinated with the campuses and the consultant to resolve inconsistencies that were discovered.

6) Finally, data was entered into calculation spreadsheets to formulate costs and other information contained in the report.

A final report from the ISES Corporation was provided in October 2004. Although there were some recommended improvements, the report found the process to be valid and well within industry standards.

In the Spring of 2005, the State's Division of Legislative Post Audit conducted a limited-scope performance audit pertaining to the use of past funding spent on deferred maintenance and the current need for

additional funds. The audit, completed in July 2005, reaffirmed the notion that aging buildings and inadequate State funding contributed directly to the current state of the facilities.

Concerned that cost data generated two years previously were becoming of little value, the campuses again audited the facilities over the summer and fall of 2006, in a similar manner to that performed in 2004.

In compliance with K.S.A. 76-7,103c, which requires a biennial report to the Legislature, the Kansas Board of Regents undertook the updating of this information. With campus architects at two campuses who were new to the process, and in an effort to maintain consistency among the audits, the Director of Facilities for the Kansas Board of Regents again performed sample audits with university architects in early August 2008. In addition to parameters previously mentioned, the audits assumed that conditions to be improved with allocated funding had been completed.

The Fall 2010 report contained some anomalies that we were unable to satisfactorily explain. As examples, the renewal costs (or deferred maintenance backlog) differences between the 2008 and 2010 reports amounted to -23% for the University of Kansas Medical Center, +53% for Wichita State University and +20% for Pittsburg State University.

Due to these unexplained differences, the Council of Business Officers again supported the idea of bringing in an independent consultant to assist.

VFA, Inc., Boston, MA was retained to provide audit training and subsequent retraining if necessary, assess existing audit forms and offer suggested improvements, perform comparative audits, provide replacement costs for buildings, utilities and infrastructure, and to validate the consistency of the audits made by University personnel in a final report.

## **The Contents of This Report**

Over the fall of 2014, the campuses audited a total of 864 buildings, 423 EBF Eligible (“mission-critical”) and 441 Non-EBF Eligible (“other”) buildings. They also quantified and audited utilities and infrastructure. The forms used in this process are included in the *Appendix* (see Appendix C). Replacement costs and definitions are also included in the *Appendix* (see Appendix D).

The bulk of the report contains Total Renewal Costs by Campus; a Summary of Building Renewal Costs and costs for individual campus buildings; and a Summary of Utility & Infrastructure Costs.

Life Safety Systems (Alarms/Sprinklers/Generators/Em. & Exit Lighting) (5 pts.)		<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
<b>Maximum Points awarded 40.85</b>						

**Overall Condition (Points) 95.00**  
**(Maximum Weighted Score = 95 Points)**

**Overall Condition Points - What does it mean?**

**Excellent (90-95)** New or near new condition as a result of recent installation, repair and/or replacement; typically less than 5 years of depreciation.  
**Good (80-89)** No obvious deficiencies in condition or performance; serviceable with basic maintenance; typically less than 10 years of depreciation.  
**Fair (60-79)** Need for minor repair and limited replacement of components based on age and/or performance.  
**Poor (30-59)** Failure of primary components and multiple systems evident; major repair or replacement required.  
**Unsatisfactory (0-29)** Components or systems unusable, code deficient and/or not suited for current use; complete replacement required.

## Definitions

**Annual Maintenance** - A combination of the following:

- **Capital Renewal/Replacement** - The systematic replacement of major building and utility systems to extend their useful life (e.g. roof replacements, HVAC retrofits)
- **Normal/Routine Maintenance and Minor Repairs** - The cyclical, planned work performed on capital assets such as buildings, fixed equipment and infrastructure to help them reach their originally anticipated life.
- **Preventive Maintenance** - The planned program of periodic inspection, adjustment, cleaning, lubrication and/or selective parts replacement, as well as performance testing and analysis intended to maximize the reliability, performance, and lifecycle of building systems and equipment.

**Capital Improvements** - The addition or expansion of facilities or significant work performed to change the interior alignment of space or other physical characteristics of an existing facility so that it can be used more effectively, or adapted for a new use.

**Current Replacement Value (CRV)** - The total project cost to construct or renovate a building, including both direct and soft costs.

**Deferred Maintenance** - Work that has been deferred on a planned or unplanned basis to a future budget cycle or until funds are available.

**Direct Costs** - The cost of labor and materials directly required to construct or renovate a building project.

**EBF Eligible** - Buildings eligible for Educational Building Fund (EBF) monies per current Board of Regents' guidance that EBF revenues be dedicated to deferred maintenance for "mission critical" buildings and infrastructure. This current Board guidance narrows the uses of EBF revenues that are outlined by K.S.A. 76-6b02.

**Facility Condition Assessment (FCA)** - A systematic approach to the inventory of the current maintenance and current capital renewal requirements of a facility.

**Facility Condition Index (FCI)** - The FCI provides a simple measurement of a facility's condition. FCI represents the ratio of the cost to correct a facility's deficiencies to the current replacement value (CRV) of the facility. The higher the FCI, the poorer the condition of the facility.

**Life Cycle** - The period of time that a building or building system can be expected to adequately serve its intended function.

**Mission Critical** - Buildings that are predominately used for the academic and/or research missions of the State universities, and the infrastructure that directly supports these buildings.

**Non-EBF Eligible** - Buildings ineligible for EBF monies include:

- All non-state owned buildings regardless of use
- Any state-owned buildings constructed in 2007 or later
- Per current Board of Regents' guidance, Buildings and infrastructure which are not predominantly used for academic or research purposes (e.g., buildings wholly or predominantly used for administrative offices, barns, chapels, child care, facility shops, intercollegiate athletics, monuments, parking garages, private residences, student health clinics, student housing, student unions, etc.)

**Operations** - Activities related to normal performance of the functions for which a building is used inclusive of administration, custodial services, housekeeping, landscaping, security services, service contracts, utility charges, trash removal, etc.

**Soft Costs** - The cost of services, material and labor indirectly required to construct or renovate a building project.

**Space Inventory** - An inventory of square feet and usage for every space within a building.
