D - Campus Building Condition Assessment Form .....	3.4
E - Definitions .....	3.5

## Executive Summary

This fifth report has been produced in an effort to identify and provide an update on the magnitude of deferred maintenance problems with a primary focus on “mission critical” buildings on the campuses of the State universities. Information for this report was developed following processes previously used for biennial reports beginning in 2004. These processes were first validated by an independent national consultant, the ISES Corporation based in Atlanta, GA, in 2004. The 2005 Legislature authorized a limited-scope Legislative Post-Audit study that confirmed the severity and magnitude of the deferred maintenance problem and affirmed that the age of the buildings and the lack of funding for maintenance have contributed directly to the current state of these facilities.

To ensure that the Fall 2012 audits were conducted consistently and accurately, VFA, Inc. based in Boston, MA was retained: to conduct training prior to building assessments; to randomly audit buildings and compare results; to assist with developing replacement costs for buildings, utilities and infrastructure; and to prepare a final report evaluating the validity of our processes.

The building audits resulted in condition values for each building. Renewal costs were calculated by subtracting the building condition value from 90% (assuming 100% as perfect condition), and multiplying the difference times the replacement costs.

This report will differ from previous reports as it will provide renewal costs for “mission critical” buildings, “other” state-owned buildings and a total for the two. This change is in direct response to information requested by the Division of Budget in 2010. Buildings not highlighted are considered “mission critical” buildings. “Other” buildings are highlighted in gray.

**The current estimate of the deferred maintenance backlog referred to as renewal costs in the schedules for “mission critical” buildings, utilities and infrastructure is approximately \$762 million, and an annual amount of \$93 million (with no inflation factor) is estimated to be required for on-going maintenance to prevent further backlog and to adequately maintain the university campuses.**

The \$762 million estimate for Fall 2012 compares to a backlog of \$904 million in the Fall 2010 report. The campuses analyzed reasons for the differences and made the following observations:

1. A combination of funding over the past five years has had a significant impact on condition values of various building systems, utilities and infrastructure. The State Educational Institution Long-Term Infrastructure Maintenance Program provided \$87 million through a combination of state funds, tuition interest dollars and tax credits. Federal stimulus ARRA funding totaled \$45.8 million and allocations from the Educational Building Fund (EBF) for Rehabilitation & Repair increased from \$15 million to \$35 million beginning in FY 2013. We have seen increases from various other sources for renovations such as federal grants and private gifts.
2. Some changes are undoubtedly due to improvements made in our processes such as audit training, development of a visual dictionary, revisions to the audit forms, grading actual conditions vs. building age, and so forth.
3. The economic downturn has certainly been a factor as projects have received favorable bids on construction labor and material costs. This has allowed more improvements to be done with the available funding.

## Introduction

### A Significant Investment

It cannot be overemphasized that the state's investment in buildings and infrastructure on the campuses of the State universities is tremendous. The State universities and their governing Board the Kansas Board of Regents oversee this investment, but the buildings and the land that they occupy belong to the citizens of Kansas.

The holdings are sizable - 858 buildings encompassing 30.7 million square feet, sited on 26,284 acres, with a replacement value of \$7.6 billion, comprising approximately two-thirds of the State of Kansas' total building inventory.

### Addressing Mission Critical Needs

This report primarily focuses on the academic and academic support buildings that are "mission critical" to the teaching and research functions of the State universities. Included for information purposes only are other state buildings that serve auxiliary functions, such as residence halls, student unions, and parking garages and also buildings that do not directly support the academic mission of the State universities, such as homes for university Presidents, athletic facilities, chapels, recreational facilities, etc.

The 433 mission-critical buildings included in this report represent 17.2 million square feet of space, with a replacement value of \$4.7 billion. Utilities and infrastructure to support these facilities add another \$414 million in replacement costs, for a total of \$5.1 billion.

### Factors Contributing to the Problem

Primary factors leading to the current state of deferred maintenance on the university campuses are a lack of funding, coupled with the age of the buildings (see Figure 1 below). It is important to note that 75% of the total inventory is at least 30 years old. A need for periodic maintenance or replacement is to be expected as building

systems and materials reach the end of life cycles. Over the past 35 years, the universities received insufficient rehabilitation and repair funding (see Appendix). Both the Legislature's Joint Committee on State Building Construction and the Board of Regents recognized this as a problem, and in fiscal year 1992, Educational Building Fund monies previously used for new capital projects were redirected to fund rehabilitation and repair projects.

Acknowledging variances for age and type of facilities, the Building Research Board of the National Research Council in their study "*Committing to the Cost of Ownership: Maintenance and Repair of Public Buildings*" concludes that an appropriate budget allocation for routine maintenance and capital renewal is in the range of 2 to 4 percent of the current replacement value (CRV), excluding major infrastructure. The Association of Physical Plant Administrators (APPA) and experts in the field of deferred maintenance generally accept this range.

Assuming the low end of the range, 2% multiplied by the CRV of \$4.7 billion equals approximately \$94 million per year that should be spent to properly maintain the mission-critical facilities on the university campuses. **This compares to the \$72 million currently committed - \$35 million allocated for FY 2011 from the EBF, and the estimated \$37 million budgeted through the operating budgets.**

The deferred maintenance backlog is a national problem, affecting both private and state institutions of higher education. Estimates of the nationwide problem vary from \$26 billion (acknowledged to be conservative) to over \$50 billion.

The 1960s through the 1980s were periods of huge growth for all of higher education. Like many institutions across the nation, nearly 40% of the Kansas Board of Regents' university space was built within that time frame. The major expansion was initiated by

unprecedented enrollment growth due to the “Baby Boom” generation.

Now, some 30-50 years later, these buildings require simultaneous overhaul of their major subsystems. Heating, ventilation, electrical, and plumbing systems that have not been replaced already are either worn out or about to wear out - and it isn't because they haven't been maintained. It is simply because the systems have reached the end of their useful life. The average life cycle of the components that make up buildings is 23 years\*.

**First Steps Taken to Address the Problem**

The Board and its institutions are appreciative of steps taken during the 2007 legislative session, enacting legislation creating the Postsecondary Educational Institution Long-Term Infrastructure Maintenance Program, as well as other important financing mechanisms to be implemented over a five year period.

For the six State universities, the five-year maintenance plan included \$90 million in direct state funding, approximately \$47 million in retained interest earnings from universities' funds, and up to \$118 million in private contributions generated by state-funded tax credits. If these separate funding mechanisms, totaling \$255 million, had been fully realized, this legislation would have addressed approximately 38% of the maintenance backlog (documented at \$663 million in the fall of 2006) existing on State university campuses.

The economic recession significantly impacted the five-year maintenance program. Ultimately, a total of \$87.4 million was made available. This included \$63.7 million in state funds for the first three years. Interest rates also failed to produce the earnings originally anticipated. Tuition interest earnings amounted to \$21.4 million over the 5-year period. Finally, despite promotion of the state tax credits by the universities, eligible donations totaled \$2.3 million.

Federal stimulus ARRA funding totaling \$45.8 million was beneficial in completing many of the planned projects.

This report presents data at a specific point in time. The \$762 million renewal cost figure presented is the amount needed to bring the buildings, utilities, and infrastructure to a **current**, acceptable level. Any funding plan to address corrective measures must recognize two factors: the need for deferred maintenance backlog reduction and sufficient capital funding to perform on-going maintenance. Without this two-pronged approach, the deferred maintenance backlog will continue to grow. Properly attending to deferred maintenance and capital renewal will require funding from a dependable, on-going revenue source over an extended time period to reach manageable levels.

\* “Successful Strategies for Reducing University Deferred Maintenance”  
Matthew C. Adams, P.E., President, M.C. Adams & Associates.

## History and Process to Develop this Report

In the fall of 2002, the Kansas Board of Regents performed a study resulting in the document *Report on State University Deferred Maintenance and Capital Renewal*. This study and the resulting report were an effort to quantify the physical condition of the facilities on State university campuses. The thoroughness and accuracy of this initial 2002 report was limited by the three-week time period allowed for its preparation. For example, buildings were given an overall facilities condition audit (FCA) score, rather than evaluating individual system components to arrive at a more accurate FCA score; costs of utilities and infrastructure were derived from data obtained from a 1987 report, with costs indexed forward to 2002; and time constraints also prevented a careful review and update of campus inventory information.

Significant improvements were made to the subsequent report prepared in 2004, with the intent to provide the most accurate information available within a reasonable timeframe. To gain a better understanding of how this was accomplished, following is a brief description of the 2004 process:

1) At the March 2004 State University Council of Presidents meeting, the Presidents and Chancellor charged the University Business Officers to develop a plan for addressing deferred maintenance that would include annual spending and some revenue bond financing. Key components of the plan included:

- The Board's Director of Facilities would work with the campus architects over the summer to update the estimated cost of the deferred maintenance problem. The group would review and update the building condition values, the condition of campus utilities and infrastructure, and the current replacement costs of these items.

- Some portion of any new revenue would be dedicated to the annual allocation for Rehabilitation and Repair (R&R) projects.
- The balance of any new revenue would be used to address deferred maintenance.
- Detailed plans would be developed by each campus to address deferred maintenance, including creating listings of buildings with the greatest need in priority order. Allocations of funding requests would be made by the Board of Regents based upon these plans.

The State University Council of Presidents and the Board of Regents subsequently concurred with these recommendations and also suggested that a consultant should be retained to validate the process.

2) In an effort to bring consistency to the facilities audits and prevent unintended biases or subjectivity, the Director of Facilities for the Kansas Board of Regents performed sample audits with university architects between June 16 and July 2, 2004. Approximately 40 buildings were evaluated on seven campuses. The buildings were intentionally selected to represent a cross-section by age, technology, programmatic use, historical significance, and so forth. In most cases, physical plant personnel accompanied the university architects to provide additional history pertaining to the mechanical, plumbing, and electrical systems.

The sample audits were used as a reference or benchmark. The campuses then completed the audits for all 537 academic/administrative buildings (commonly termed educational and general or E&G) and submitted them to the Board office on August 1, 2004.

A few parameters were established prior to the audits:

- When evaluating conditions, err on the side of conservatism; it is more credible to understate the problem than to overstate it.
- Assume conditions that will be improved by performance contract projects have been completed.
- Use the definitions on the assessment forms to evaluate the various building, utility and infrastructure components.

3) Simultaneously, the Board office worked with the universities to update replacement costs of buildings, utilities and infrastructure; building inventories; quantities of utilities and infrastructure and other data.

4) In July 2004, an RFP was sent to three well-known facilities management consultants, suggested by the Association of Physical Plant Administrators (APPA). The Council of Business Officers and the Campus Architects reviewed their credentials, and ISES Corporation, Atlanta, Georgia, was selected to provide validation to the process being undertaken.

The Executive Vice-President of ISES Corporation conducted an independent sample audit of the campus facilities the week of August 16-20, 2004.

5) Board staff reviewed assessment forms and other received data and coordinated with the campuses and the consultant to resolve inconsistencies that were discovered.

6) Finally, data was entered into calculation spreadsheets to formulate costs and other information contained in the report.

A final report from the ISES Corporation was provided in October 2004. Although there were some recommended improvements, the report found the process to be valid and well within industry standards.

In the Spring of 2005, the State's Division of Legislative Post Audit conducted a limited-scope performance audit pertaining to the use of past funding spent on deferred maintenance and the current need for additional funds. The audit, completed in July 2005, reaffirmed the notion that aging buildings and inadequate State funding contributed directly to the current state of the facilities.

Concerned that cost data generated two years previously were becoming of little value, the campuses again audited the facilities over the summer and fall of 2006, in a similar manner to that performed in 2004.

In compliance with K.S.A. 76-7,103c, which requires a biennial report to the Legislature, the Kansas Board of Regents undertook the updating of this information. With campus architects at two campuses who were new to the process, and in an effort to maintain consistency among the audits, the Director of Facilities for the Kansas Board of Regents again performed sample audits with university architects in early August 2008. In addition to parameters previously mentioned, the audits assumed that conditions to be improved with allocated funding had been completed.

The Fall 2010 report contained some anomalies that we were unable to satisfactorily explain. As examples, the renewal costs (or deferred maintenance backlog) differences between the 2008 and 2010 reports amounted to -23% for the University of Kansas Medical Center, +53% for Wichita State University and +20% for Pittsburg State University.

Due to these unexplained differences, the Council of Business Officers again supported the idea of bringing in an independent consultant to assist.

VFA, Inc., Boston, MA was retained to provide audit training and subsequent retraining if necessary, assess existing audit forms and offer suggested improvements, perform comparative audits, provide

replacement costs for buildings, utilities and infrastructure, and to validate the consistency of the audits made by University personnel in a final report.

### **The Contents of This Report**

Over the fall of 2012, the campuses audited a total of 807 buildings, 433 “mission-critical” and 374 “other” buildings. They also quantified and audited utilities and infrastructure. The forms used in this process are included in the *Appendix*. Replacement costs and definitions are also included in the *Appendix*. The bulk of the report contains Total Renewal Costs by Campus; a Summary of Building Renewal Costs and costs for individual campus buildings; a Summary of Utility & Infrastructure Costs; and costs for individual campus components.

## KANSAS BOARD OF REGENTS FACILITY CONDITION AUDIT

Date: \_\_\_\_\_  
 University Campus: \_\_\_\_\_  
 Building Name: \_\_\_\_\_  
 Surveyor Name: \_\_\_\_\_

Mark the appropriate option box for each category shown

A. Exterior Building Components	29 pts. possible					
		Excellent	Good	Fair	Poor	Unsatisfactory
Maximum Points awarded 27.55	Foundation/Stairs/Structure (10 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Walls (8 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Roof (7 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Windows/Doors/Skylights (4 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

B. Interior Building Components	28 pts. possible					
		Excellent	Good	Fair	Poor	Unsatisfactory
Maximum Points awarded 26.60	Floor Structure Assembly (8 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Partitions (8 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Ceilings (4 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Fixed Equipment (2 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Doors (2 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Interior Floor Coverings & Wall Finish/Trim (2 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Elevators (2 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

C. Engineered Systems Components	43 pts. possible					
		Excellent	Good	Fair	Poor	Unsatisfactory
Maximum Points awarded 40.85	Electrical (7 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Plumbing (6 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Heating/Ventilation/AC & BACS (15 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	IT Voice/Data (4 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Lighting (6 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>
	Life Safety Systems (Alarms/Sprinklers/Generators/Em. & Exit Lighting) (5 pts.)	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>

Overall Condition (Points)      95.00

(Maximum Weighted Score = 95 Points)

**Overall Condition Points - What does it mean?**

**Excellent (90-95)** New or near new condition as a result of recent installation, repair and/or replacement; typically less than 5 years of depreciation.  
**Good (80-89)** No obvious deficiencies in condition or performance; serviceable with basic maintenance; typically less than 10 years of depreciation.  
**Fair (60-79)** Need for minor repair and limited replacement of components based on age and/or performance.  
**Poor (30-59)** Failure of primary components and multiple systems evident; major repair or replacement required.  
**Unsatisfactory (0-29)** Components or systems unusable, code deficient and/or not suited for current use; complete replacement required.

## Definitions

**Annual Maintenance** - A combination of the following:

- **Capital Renewal/Replacement** - The systematic replacement of major building and utility systems to extend their useful life (e.g. roof replacements, HVAC retrofits, etc.).
- **Normal/Routine Maintenance and Minor Repairs** - The cyclical, planned work performed on capital assets such as buildings, fixed equipment and infrastructure to help them reach their originally anticipated life. Deficiency items are typically low in cost to correct.
- **Preventive Maintenance** - The planned program of periodic inspection, adjustment, cleaning, lubrication and/or selective parts replacement of components, as well as performance testing and analysis intended to maximize the reliability, performance, and lifecycle of building systems and equipment.

**Capital Improvements** - The addition or expansion of facilities or significant work performed to change the interior alignment of space or other physical characteristics of an existing facility so that it can be used more effectively, or adapted for a new use.

**Current Replacement Value (CRV)** - The total project cost to construct or renovate a building, including both direct costs and soft costs.

**Deferred Maintenance** - Work that has been deferred on a planned or unplanned basis to a future budget cycle or until funds are available.

**Direct Costs** - The cost of labor and materials directly required to construct or renovate a building project.

**Facility Condition Assessment (FCA)** - A systematic approach to the inventory of the current maintenance and current capital renewal requirements of a facility.

**Facility Condition Index (FCI)** - The FCI provides a simple measurement of a facility's condition. FCI represents the ratio of the cost to correct a facility's deficiencies to the current replacement value (CRV) of the facility. The higher the FCI, the poorer the condition of the facility. General industry guidelines are: 0-5% is good; 5.01-10% is fair; and greater than 10% is poor.

**Life Cycle** - The period of time that a building or building system can be expected to adequately serve its intended function.

**Operations** - Activities related to normal performance of the functions for which a building is used inclusive of administration, custodial services, housekeeping, landscaping, security services, service contracts, utility charges, trash removal, environmental services, etc.

**Soft Costs** - The cost of services, material and labor indirectly required to construct or renovate a building project.

**Space Inventory** - An inventory of square feet and usage for every space within a building.
